Course Description

This course provides a basic, yet broad, introduction to political science. Given the complex and interdependent character of twenty-first century politics, it is fitting that an introductory course of this sort take a comparative approach, drawing upon evidence and examples from across our world to illustrate meaning and make generalizations. We begin with an overview of how political scientists study *the political* and explore some of the core concepts that form the language of analysis within the discipline. We then apply this knowledge to politics at the individual and group levels. Next, we look at how political institutions are organized and the dynamics of key political processes, such as public policy making and the exercise of power, political development, and political violence. Political Science is basically an inquiry into what is, what should be (the normative aspect), and what can actually be known about the political world. This course seeks to pose some of the critical questions and to provide the tools to enable you to give informed responses.

Learning Outcomes

At the conclusion of this course, successful students should be able to:

- Understand *the political* and the sources of political knowledge
- Understand and apply the basic language and concepts of politics, including power, authority, legitimacy, beliefs, interests, and political culture

- Make informed, accurate judgments about the value disagreements that occur within politics
- Understand the modes of operation of governmental institutions, structures, and processes as they operate within in different social and cultural contexts
- Undertake basic political analysis using the concepts, methods, and approaches of the discipline of political science
- Demonstrate improved research, writing, critical-thinking, and global competencies
